I am a person who loves technology from an early age, I love challenges and I always look for new things to create and do, I love being part of great innovations in the projects I work at the same time that I enjoy teamwork and learn from my peers..

Skills

- Front end skills: HTML, CSS, React, Redux, Javascript, Typescript, Material UI
- Back end skills: Node.js, Express, mySQL, PosgresSQL, MongoDB
- Design skills: Figma, Photoshop, Adobe After Effects

Languages

- English C2 - Proficiency
- English C2 - Education First Test, 2022
- English B2 - Cultural Inglesa, Berazategui 2018-2020
- Portugués A1 - Basic

Experience

- **Full Stack Developer, Diseñador Web**

Henry Bootcamp, Buenos Aires, Argentina

Experience working in **Backend** using: **Node.js, Express, SQL, Postgress y MongoDB.**

Experience working in **Frontend** using: **React, Redux, CSS modules, Javascript y Typescript.**

- Developed "**Weather App**", a basic application, which allows the user to see the different climates of any part of the world live using an API that provides such information.
- Developed "**Countries App**", this application aims to display detailed information from all of the countries using the data provided by an API which is stored in a database. Also this application offers the possibility of seeing tourist activities and creating them in case they don't exist.
- Developed "**Changuitas app**", an application developed in a group work environment (of 7 people), using the SCRUM methodology. This application is a job platform and looks forward to connect all those people in search of services such as; plumbing, masonry, electricity, etc, with those who can provide such services (the workers). This app counts with interesting features such as:
 - A **register system** for both **customer user** and **worker user**
 - A **chatbot** to **clear out** doubts
 - A **chat** that allows all **users** to **communicate**
 - A **map system** which allows both users to see **their locations**
 - Third party authentication (**auth0** for google)
 - A **contract system** to **define work details** such as **location, time and costs**
 - A **rating system** and **user comments on their profiles**
 - **Admin panel** (for the owner of the platform)
